DTAILED ACTION

Election/Restrictions

This application contains claims directed to the following patentably distinct species:

Species I: Claim 1,5,9,13,17,21,25,29,33,37,41,45,49,53 drawn to using higher frame rate than normal frame rate to reproduce in slow motion.

Species II: Claim 2,6,10,14,18,22,26,30,34,38,42,46,50,54, drawn to moving image data moving image data for special reproduction are constituted by image frames which have the equal composition to images within the frame images that constitute the moving image data for normal reproduction and which have a different amount of information from the images that constitute the moving image for normal reproduction.

Species III: Claim 3,7,11,15,19,23,27,31,35,39,43,47,51,55 drawn to moving image data for special reproduction are constituted by image frames having images generated by light of a different frequency domain from that of images within image frames constituting the moving image data for normal production.

Species IV: Claim 4,8,12,16,20,24,28,32,36,40,44,48,52,56, drawn to the moving image data for special reproduction are constituted by images having a different resolution from that of images within image frames constituting the moving image data for normal production.

Species V: Claim 57, 58, drawn to data structure having first, second and third data part, said third data stores information that associates said first and second data part.

. The species are independent or distinct because claims to the different species recite the mutually exclusive characteristics of such species. In addition, these species are not obvious variants of each other based on the current record.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, no claim is generic.

There is an examination and search burden for these patentably distinct species due to their mutually exclusive characteristics. The species require a different field of search (e.g., searching different classes/subclasses or electronic resources, or employing different search queries); and/or the prior art applicable to one species would not likely be applicable to another species; and/or the species are likely to raise different non-prior art issues under 35 U.S.C. 101 and/or 35 U.S.C. 112, first paragraph.

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species to be examined even though the requirement may be traversed (37 CFR 1.143) **and (ii) identification of the claims encompassing the elected species**, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

The election of the species may be made with or without traverse. To preserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the election of species requirement, the election shall be treated as an election without traverse. Traversal must be presented at the time of election in order to be considered timely. Failure to timely traverse the requirement will result in the loss of right to petition under 37 CFR 1.144. If claims are added after the election, applicant must indicate which of these claims are readable on the elected species.

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the species unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other species.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which depend from or otherwise require all the limitations of an allowable generic claim as provided by 37 CFR 1.141.
